Task 7: Test access to C:\Research folders

Does Bill Malone have access to the Research folder?

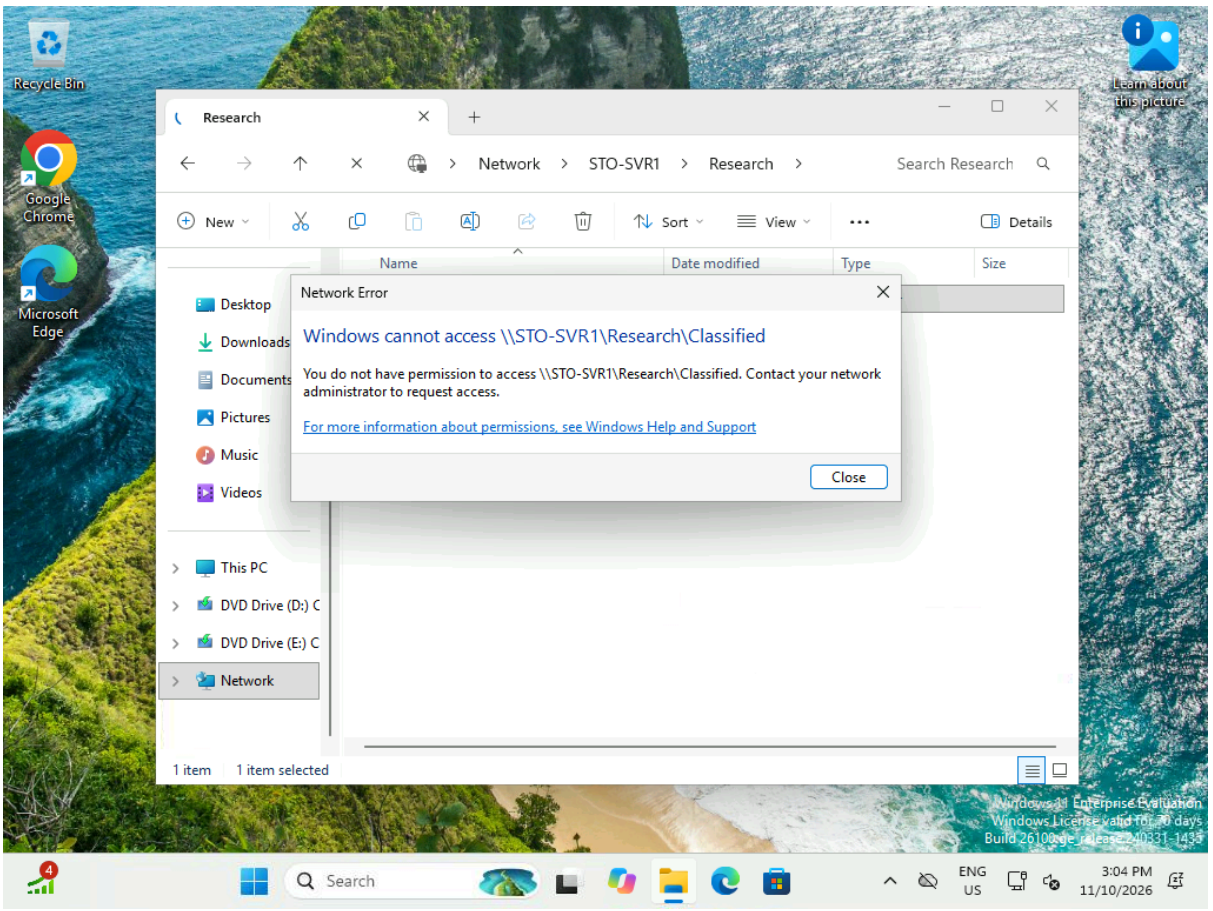

No

Bill is not a member of the Research group, and the share permissions only grant access to the Research group.

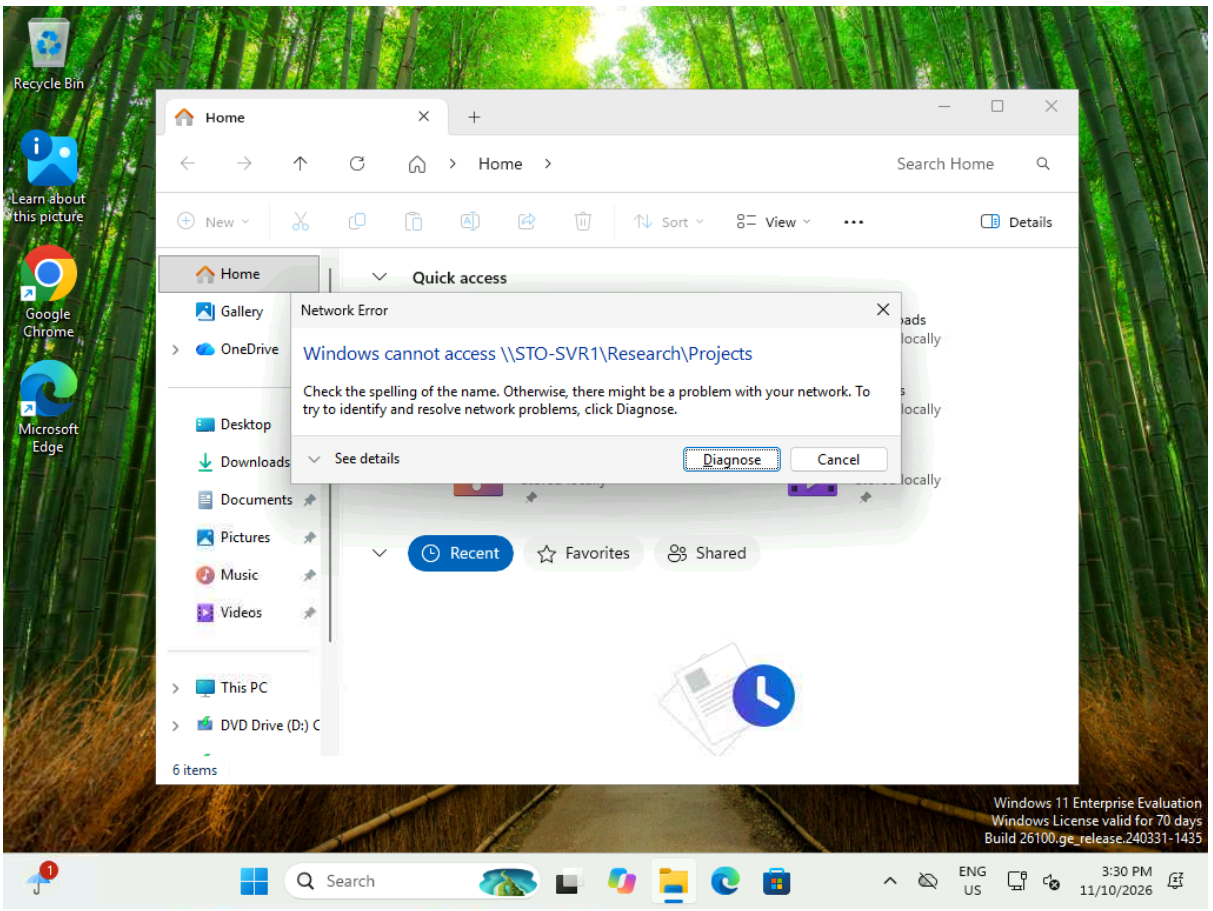

Question 7.7

Yes. Aziz Hassouneh has access to the Research\Projects folder because he is a member of the Research security group

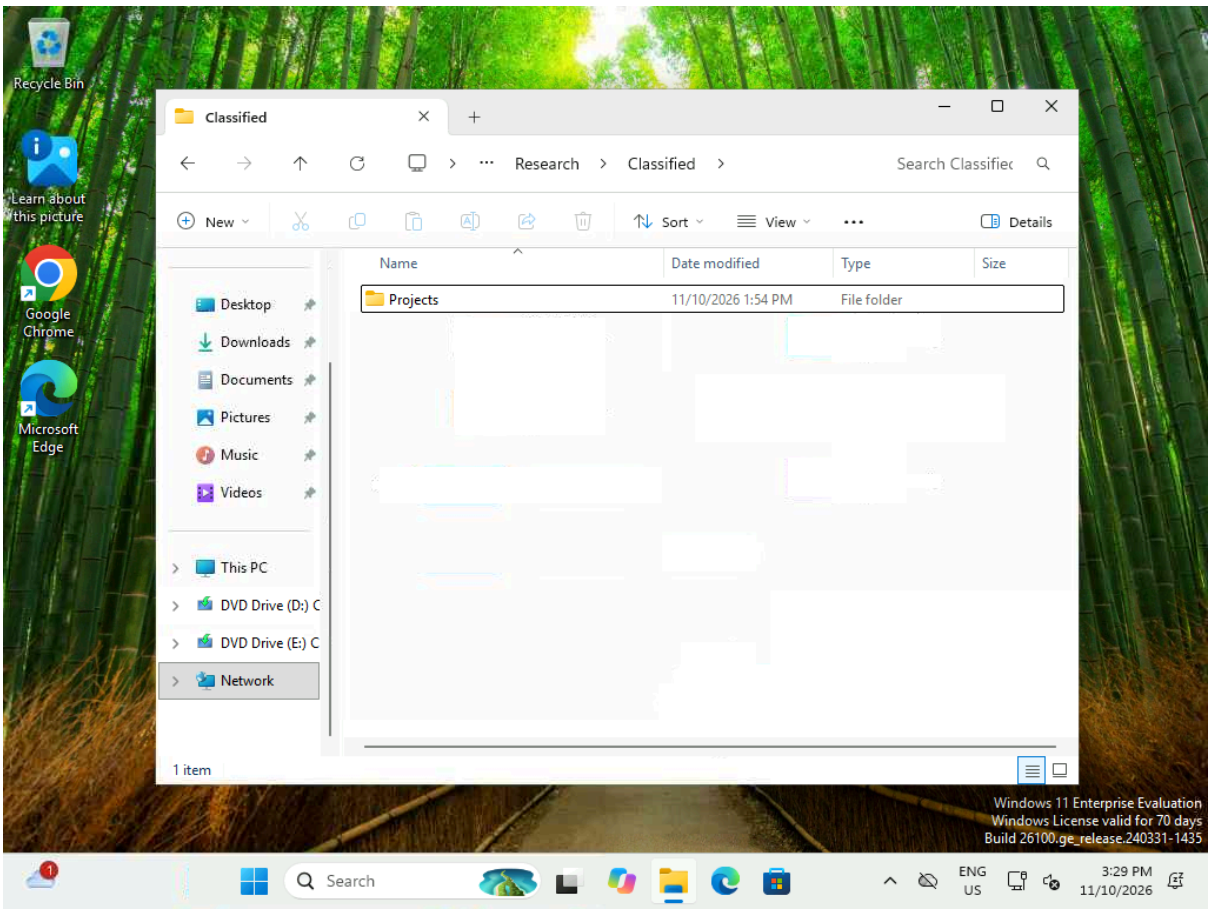

Question 7.8

No. Aziz Hassouneh does not have access to the Research\Classified folder because the Research group's permissions were removed from the Classified folder

7.11. Does Allie Bellew have access to the Research\Projects folder? Why or Why not?

No. Allie Bellew does not have access to the Projects folder because she is not a member of the Research group, which has permission to access that folder

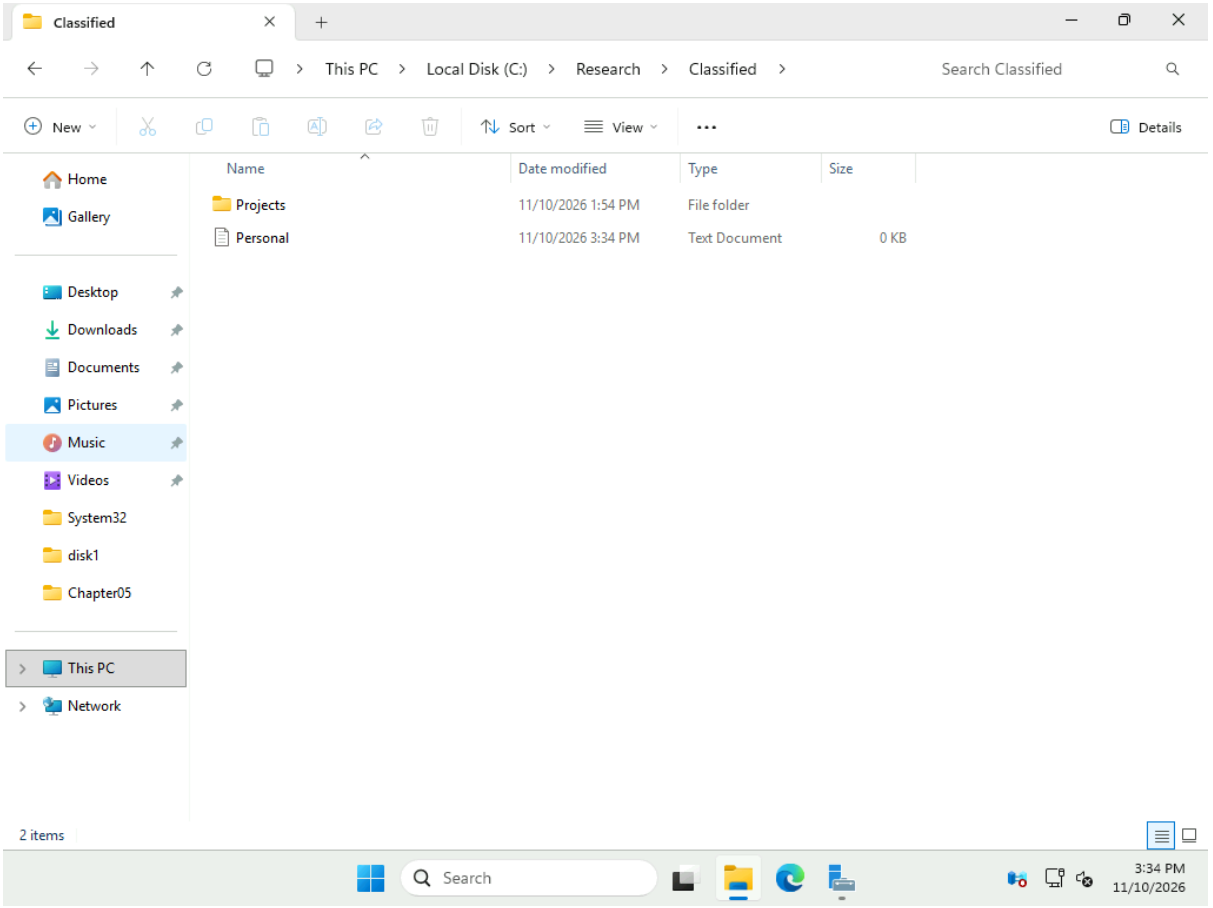

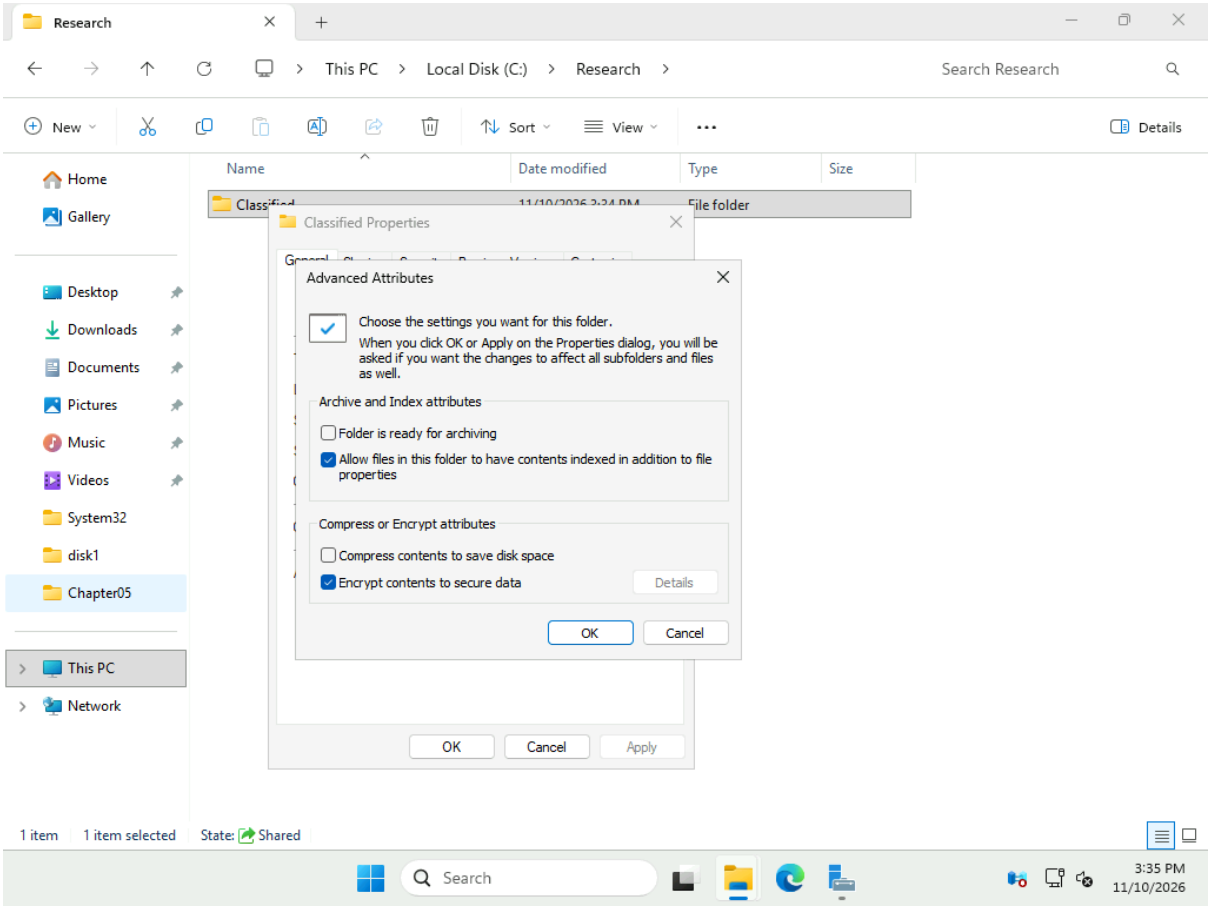

7.12. Does Allie Bellew have access to the Research\Classified folder? Why or Why not?

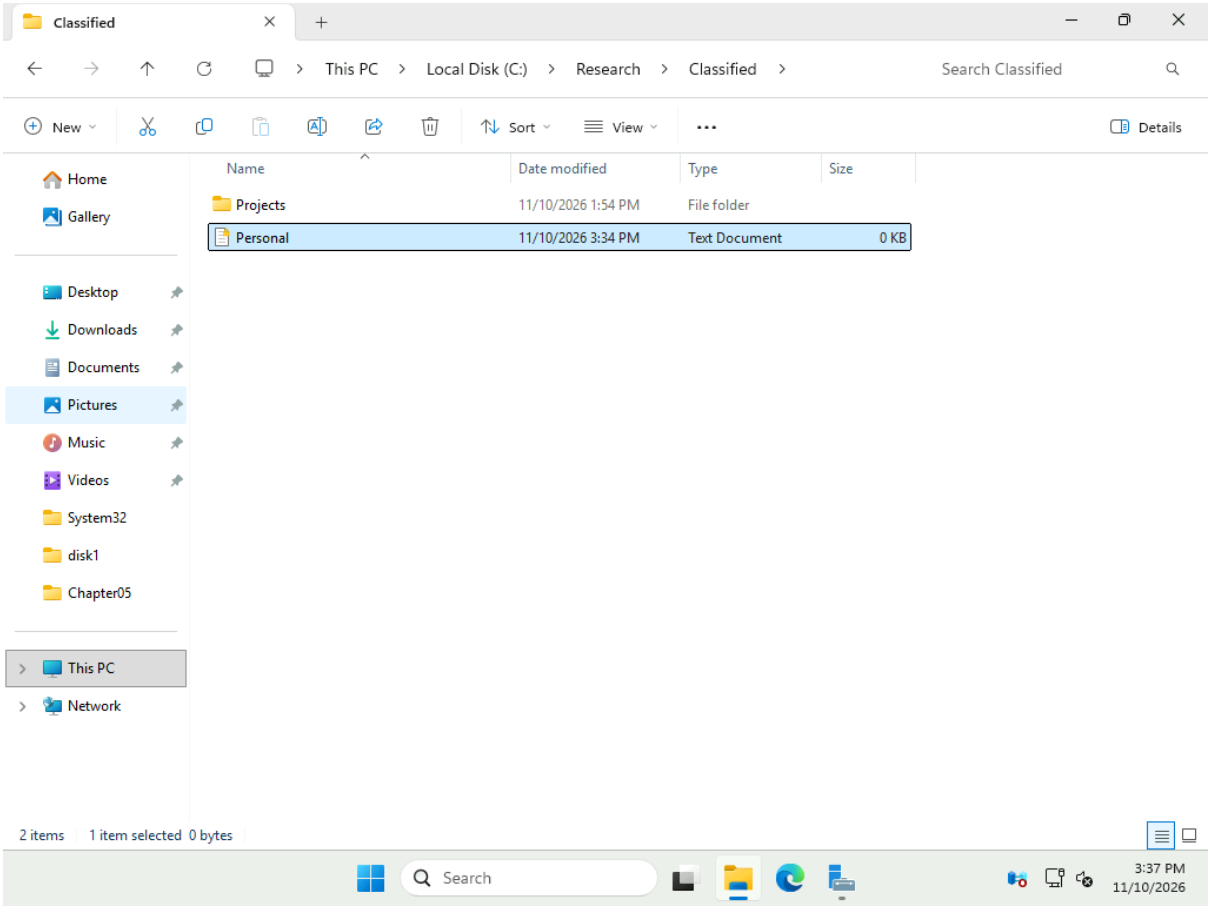

Yes. Allie Bellew has access to the Classified folder because she was explicitly granted Full Control permission on that folder

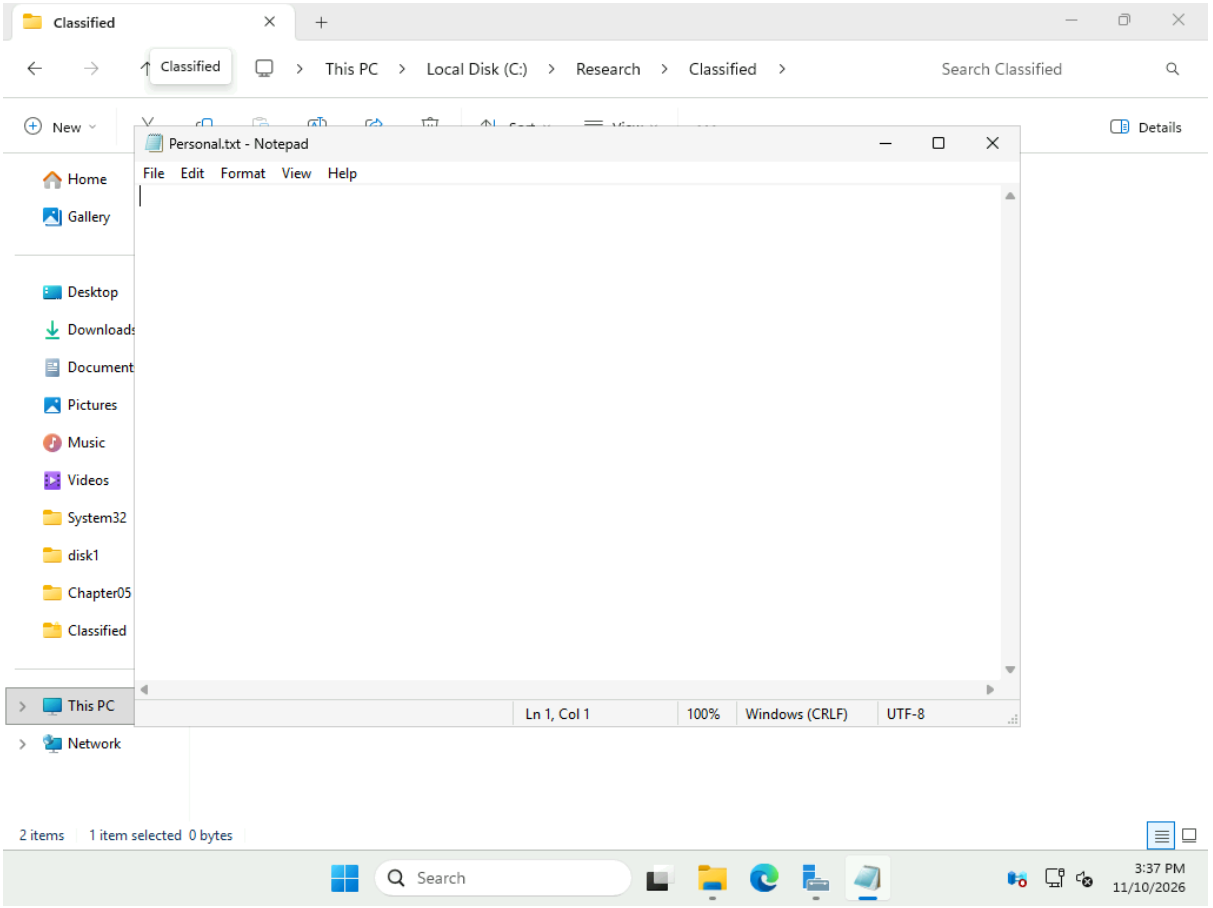

Practice 3: Encrypting Files and Folders

Task 8: Encrypt files and folders by using Encrypted File System (EFS)

Enable access-based enumeration
Access-based enumeration displays only the files and folders that a user has permissions to access. If a user does not have Read (or equivalent) permissions for a folder, Windows hides the folder from the user's view.
Allow caching of share
Caching makes the contents of the share available to offline users. If the BranchCache for Network Files role service is installed, you can enable BranchCache on the share.
Enable BranchCache on the file share
BranchCache enables computers in a branch office to cache files downloaded from this share, and then allows the files to be securely available to other computers in the branch.
Encrypt data access
When enabled, remote file access to this share will be encrypted. This secures the data against unauthorized access while the data is transferred to and from the share. If this box is checked and grayed out, an administrator has turned on encryption for the entire server.

File name pattern (optional):
The classification rule assigns the property only if all expressions that you specify are found. Strings are not case sensitive unless you choose the StringCaseSensitive or RegularExpression types.
Complex regular expressions can reduce classification speed and consume large amounts of memory. See MSDN for more infomation about regular expressions.
To classify Microsoft Office files, before running the classification rule for the first time, we recommend installing the latest version of the Microsoft Office Filter Pack.

Help
Create Classification Rule
General
Scope
Classification
Evaluation Type
By default, property values that have already been set are ignored during classification. To enable this rule to re-evaluate existing property values, check the box below.
Re-evaluate existing property values
When a conflict occurs between the new and the existing value:
Overwrite the existing value
Clear Automatically Classified Property
Once selected this will enable classification to clear the previous system defined property value if it no longer applies to the updated file.
Clear User Classified Property
Once selected this will enable classification to clear the previous user defined property value if it no longer applies to the updated file.
Aggregate the values.
For Yes/No and Ordered List property types, the value with the higher priority is selected. For Multi-Choice and Multi-String property types, the values are combined. Date-time, String, and Number property types produce an error when different values are aggregated but do not prevent other files from being classified.

Specify Cluster Address
A cluster address makes it possible for AD RMS clients to communicate with this cluster over the network. We recommend that you configure AD RMS to use the Secure Sockets Layer (SSL) protocol to encrypt network traffic between AD RMS clients and this cluster. You must use an SSL-encrypted connection if you intend to federate this cluster.
Connection Type:
Use an SSL-encrypted connection (https://)
Use an unencrypted connection (http://)
Fully-Qualified Domain Name:
Port:
http://
adrms.ETHA.com
80
You cannot change this address or port number after AD RMS is installed and configured.
